

Do you need to work with PDF documents ?

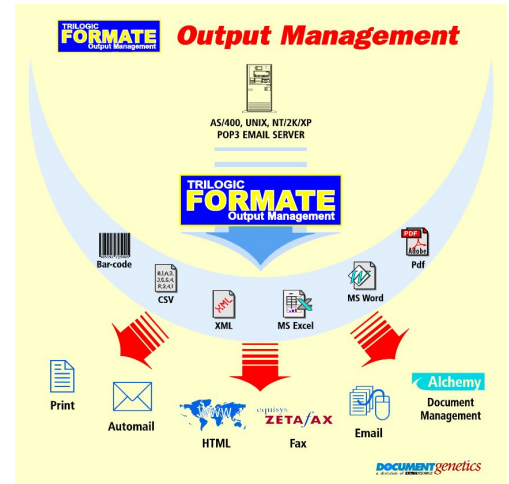

Deliver documents anywhere, anytime using Formate output management software

## Features

- Extract data from PDFs
- Move, copy or publish PDF files to document management systems
- Split PDFs
- Add additional pages to PDF files
- Combine PDF files
- Add signatures and images to PDF files
- Auto publish PDFs to SharePoint
- Sort print jobs to reduce postage costs
- Add optical marks for auto-envelope stuffing
- Add bar codes to PDFs
- Submit PDF files to document workflows based on data within the PDF

The Portable Document Format (PDF) has become the de facto standard for sharing, printing and archiving documents throughout the world.

Formate software has a powerful PDF editing module which allows you to modify or work with PDF documents, extending the range of input data types Formate can work with—these include: ASCII text, CSV, XML, .XLS, .DOC, PDF or a database (SQL, Oracle etc).

There are two main purposes for PDF editing:

**1/ Extract text from a PDF**— this allows you to inspect a PDF file and make rules based decisions, or use the content for other purposes such as storing it in a database. You can choose to extract the text into a plain text file which can then be fed back into another Formate project or be exported to a third party application.

### Consider an application

It's common place now for companies to receive invoices from suppliers in PDF rather than paper format. Using Formate it's possible to read the PDF invoice and automatically extract the key data from the invoice. The invoice can then be automatically registered on the business system or passed on to an approval workflow process.

**2/ Modify an existing PDF**— allows existing PDFs to be modified or new ones to be created from existing ones. For example, you can extract specified pages from one or more existing PDFs to create a new one, which effectively means you can split or merge PDFs, or produce a subset of an existing one. You can also add new content such as Optical Mark Recognition (OMR) lines or even new text or graphics and this includes inserting a completely new page, such as a cover page.

### Consider an application

A company may be using Formate to invoice their customers. One of the obstructions to fast payment of an invoice can be "Proof of Delivery". Formate can create the invoice, automatically extract a copy delivery note from a document management system in PDF format and attach seamlessly to the invoice – the combined invoice and delivery note can then be printed, faxed or emailed accordingly.

**Interested in Formate?** Call us now on 0870 787 9185 and we will be happy to demonstrate Formate or arrange your own evaluation copy.

*Document Genetics are the sole distributor for Formate software – a UK company providing a comprehensive range of document management solutions. We focus on improving document automation, workflow and collaboration within our client organizations, and our range of innovative solutions and specialist services help to save time and money by processing documents and data more efficiently.*
