Whatever flavour of invoice, we'll EAT it for breakfast!

Walk into any company, large or small, and you'll still find an accounts team processing paper invoices

In an ideal world, we'd all be sending electronic invoices and many larger organizations already do — but it's often the small suppliers and customers who create the problem. They can't and won't invest thousands of pounds in new technology and business procedures. They don't have the volume, the cash or the inclination to make it work.

We all accept that processing a paper invoice is crazy in this day and age, but how do you create a strategy to deal with the real world.

Is there is another way?

Yes, we have a solution which will process any type of invoice and turn it into useful information. We can also match invoices to the original PO and pass it to an approval process if it doesn't match automatically. For large suppliers we can accept structured data files like XML or EDI - for the smaller ones we can process a PDF sent via email, and if there's still some paper invoices left, our powerful OCR technology will save you time dealing with them.

Capture invoices via any delivery method:

Post Fax Email FTP EDI VAN Web Portal

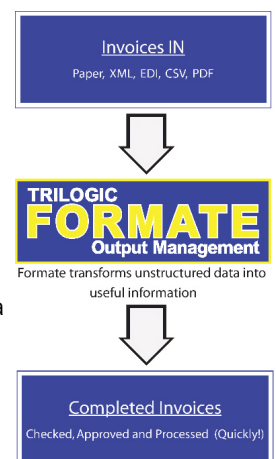

Capture invoices in any file format:

XML PDF XLS CSV EDI Paper

At the end of the process we automatically release the invoice data to your ERP or accounting system and finally archive the invoice.
