

VirtualReScan™ Perfect Scans the First Time - Every Time

THE NEXT EVOLUTION IN PRODUCTION SCANNING

Kofax's VirtualReScan is a powerful combination of hardware and intelligent software that allows scanners to do what they always were meant to do: produce perfect images every time. VRS dynamically corrects documents that are highly skewed and even auto compensates for poor contrast. And that's just the beginning.

When the VRS monitoring agent detects an inferior image, a QC dialog pops up that provides the scan operator with a recommended solution for correcting the image. The suggested correction can be accepted or the user can adjust the scanner controls in real time and watch the image dynamically change based on the input provided. Never again will a less-than-perfect image leave your scanner.

THE BENEFITS ARE CLEAR

- Intelligent "monitoring agent" provides real-time quality control
- Interactive user interface allows quick and easy setup of scanner properties
- Mixed batch scanning greatly minimizes document preparation time
- Optimized for a broad range of document types
- Eliminates need to rescan poor quality images

INTRODUCING A NEW CONCEPT IN BATCH PREPARATION: NONE

VirtualReScan reinvents the concept of folder-based scanning. Imagine the ability to simply take the contents of a file folder and drop it into the scanner. There's no need to worry about physical page size – VRS automatically detects, deskews, crops and corrects the orientation of the image. And there's no need to worry about different quality documents (multi-generation copies, NCR forms, faxes) in the same batch either. VRS is optimized to dynamically correct a vast array of different document types. And remember, if VRS thinks its default settings aren't enough, the user interface pops up and allows manual intervention.

POWERFUL EXCEPTION HANDLING

VirtualReScan offers exception handling features you can't get anywhere else. VRS helps recover from paper jams by showing the user the last successfully scanned page and allowing the jammed page to be fed into the scanner again. It detects bent corners and misfeeds immediately and allows them to be corrected before the page is scanned. If a scanner cable gets loose, VRS tells you. With VRS installed, problem images are detected before they occur and can be fixed immediately. No more unreadable images, no more rescanning, no more mistakes. It's that powerful.

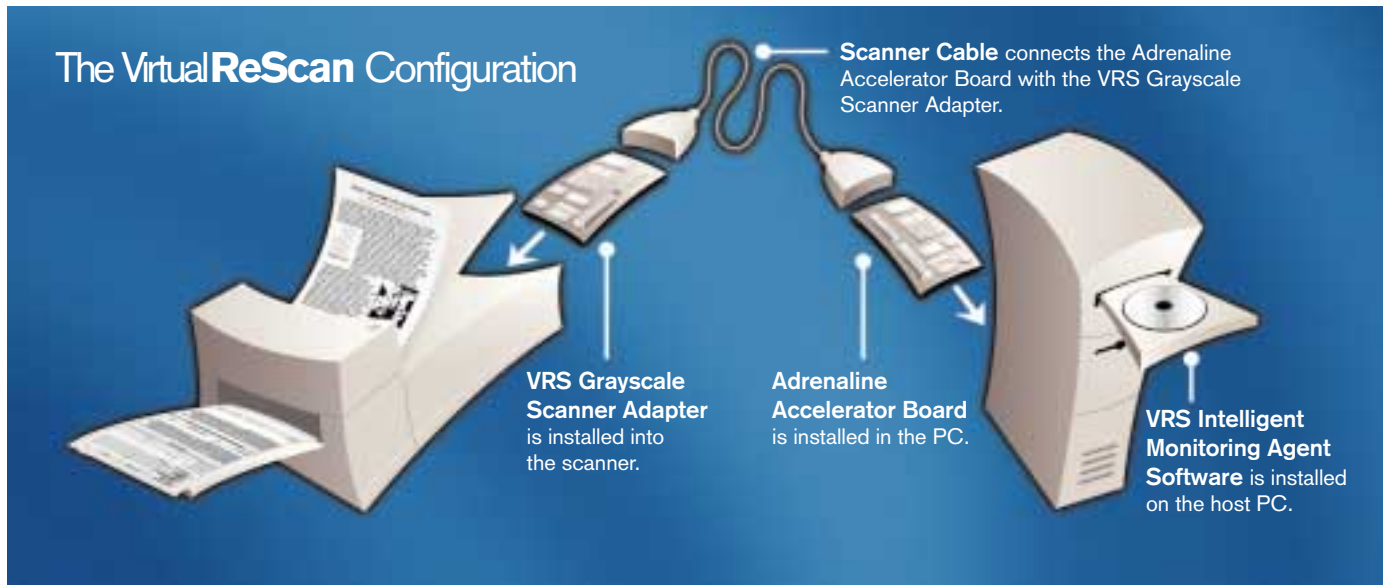

IT WORKS WITH YOUR APPLICATION

VRS is designed to work with any 32-bit application that supports Kofax Adrenaline boards, including applications from FileNET, Adobe, Eastman Software, and others. VRS is also compatible with all ISIS®-enabled applications and all 32-bit TWAIN applications. And installation is a snap because you don't need to change your application or download new drivers. Just plug in the boards and install the monitoring agent and you're done.

FEATURES

- Grayscale deskew correction to +/- 45 degrees
- Auto page width/height detection and cropping
- Accelerated scanning (allows scanning at 200 dpi speeds with 300 dpi quality)
- Mixed batch scanning
- Mixed document quality scanning (folder-based scanning)
- Auto resolve errors at scan time
- Folded corner detection
